

VDS Pro Recommended Hardware Specification

For EU and bring-your-own-hardware buyers who want a compatible VDS Pro station before ordering equipment.

Gaming PC

- Modern Windows gaming PC with dedicated graphics card
- 16GB RAM minimum, 32GB recommended for training-room headroom
- Fast SSD storage for VDS Hub and simulator builds
- Wired networking preferred for managed training rooms

Display and Mounting

- Large curved display recommended for single-screen training stations
- 49-inch class curved display or triple-display setup for professional rooms
- Dedicated monitor mount matched to the cockpit and display weight
- Room layout should avoid glare and allow instructor supervision

Driving Controls

- Moza wheel and pedals recommended for the VDS Pro station offer
- Indicator stalk strongly recommended for road-driving training workflows
- Shifter optional depending on lesson plan and vehicle type
- Controls should be fixed securely to the rig before calibration

Rig and Room

- Adjustable driving sim rig or commercial cockpit
- Safe cable management and enough clearance for entry and supervision
- Allow roughly 2.0m x 1.5m for a compact station before final layout checks
- On-site installation is UK-only; EU buyers can request setup guidance
